

Hackathon – Angular

Case Study:

In this case study you will implement a website which shows the NCS Services given to the customer. Design a about us, contact us and other service pages provided by NCS.

Design:

1. Register & Login: Users should be able to register and login to the system.
2. User Registration Page Implementation
 - a. While registering, customer need to provide the following information
 - i. Email-id – (@Id)
 - ii. Name
 - iii. Address
 - iv. Account no.
 - v. Mobile no.
 - vi. Password
 - b. You should implement the validation for the above fields in which email id should accept only valid email id format (xxx@xx.com), mobile number should be 10 digits, name can't be empty, password can't be empty.
3. Once successfully entered the details it displays “Registration completion” message
4. Login Page Implementation
 - a. For login user must enter following fields
 - i. Email-id
 - ii. Password
 - b. Once successfully entered the details it should redirect to home page on successful login
5. Tools and Technologies to be used
 - a. Angular
 - b. Angular Material
 - c. Bootstrap
