

## WorkDistribution

Technologies and frameworks that we are using for our project development:

Angular for FrontEnd Development.

Spring Boot for BackEnd Development .

Databases are MongoDB and MySQL.

We divided user stories into following main services and sub services:

1) User Service

1.1) Registration Service

1.2) Login Service

2)Book Service

3)Admin Service

4)Order Service

5)Cart Service

6) If need arises, we will add more microservices.

In every service we are performing required CRUD operations.

So, the distribution of services is:

<b>Arun Saji</b>	<b>Rishi Beri</b>	<b>Srinivas</b>	<b>Araju Mulla</b>
Book Service	Order Service	User Service	Admin Service
Cart Service	Cart Service	Cart Service	Cart Service
